

Preface

The 7 Laws of clearing CA Final contains laws that have helped many students realize their dream of becoming a Chartered Accountant. When I noticed that the ideas I was disclosing to the students were making a difference to their studies and brought them favorable results I decided to pen them down in the form of a book. The book in your hand holds secrets that have been tried and tested by many students including myself.

I know with my own experience that clearing CA exam is not just about hard work because I cleared few subjects without any form of hard work and I know for sure that clearing CA exams is not a direct result of hard work because I failed in few subjects inspite of all the hard work! Acquiring a degree like CA, that gives you respect and recognition like none other requires a lot more than mere hard work.

You must have noticed many students who pass CA Final with considerable ease. What is it that helps them clear CA Final *without* hard work? While there are students who burn the midnight oil and study tirelessly day in and day out and still manage to fail... why? Have you ever been faced with such questions? If yes, this book answers all these questions and if not, after having read this book you will have the answers already even before you are confronted with these questions that will come your way sooner or later.

There are direct and indirect causes of failure in a course like CA Final. Out of the 7 laws, 5 tackle the direct causes while the other 2 take care of the indirect ones. All the ideas have been well backed up by the toppers of CA Final course and I am absolutely confident that anyone who masters & applies the 7 laws can succeed not only in CA Final but any exam in the world!

When I discussed the laws contained in this book with my fellow Chartered Accountant friends and colleagues, they unanimously believed that these formulas must be taught to all students in all schools and colleges including ICAI. Many were of the opinion that if these principles are taught in their strict sense these could revolutionize the entire education system and no student would ever find it tough to acquire the degree or education that he is after.

Many students share with me their success story after applying the laws of this book in their studies and it gives me immense pleasure that I could help them realize their dream because I know what it means for any middle class student like I have been and to become a Chartered Accountant. A CA student not only carries the pressure of clearing the exam to make a career for himself but also the burden of expectations of the entire family who looks upon him to become a CA and end the financial woes of the family. If this book in any way helps you in your endeavor of becoming a Chartered Accountant then do share your story with me and I will share it with the world!
